

Refratechnik Training Center – a value-added service for our customers in Asia

Seminar contents

Detailed knowledge about refractory materials as well as optimized installation methods are crucial for the operation of cement and lime kilns. Therefore it is important that the personnel involved in refractory linings can rely on a broad knowledge related to refractories. The training seminar is customized for refractories used in the cement industry with following main objectives:

- transfer of basic knowledge about refractory materials, the necessary raw materials involved as well as their processing and handling to produce refractory bricks and castables,
- theoretical as well as practical instruction of the best practice of brick and castable installation in rotary kilns and corresponding aggregates,
- comprehensive information about quality and test methods applied during the production of refractory materials and
- comprehensive information about all kinds of wear phenomena impacting refractory materials during kiln line operation.

Seminar participants

In order to achieve a highest possible training success the number of participants in seminars as such is limited to a maximum of 24 persons which could come from a wide range of positions within their plants. The participants are mainly in charge as a plant or production manager, as their assistants or as kiln master / shift leader responsible for the selection, storage or installation of refractory materials.

The trainers

The trainers are engineers and technicians with many years of experience in the refractory field, especially in the cement and lime industry.

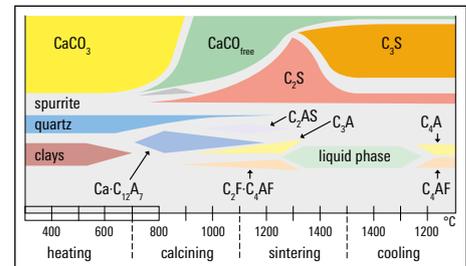

Lectures

The seminars are structured in such a manner that in the morning of a seminar day the theoretical part will be presented. State-of-the-art equipment is available located in a special seminar room.

Practical exercises

The practical part of our seminars takes place predominately within the afternoon hours. In order to demonstrate and exercise the different installation techniques of refractory materials in different kiln aggregates a show-jumping course has been set up.

Seminar documents and certificate

The presentations given during each seminar as well as related information material will be handed over to each participant at the end of the event.

After successful seminar participation and a final test participants will receive a certificate related to the particular seminar topics.
